

School education conference

Furthering innovation and
sustainable education in schools

14 – 15 December 2023
British Council, New Delhi

Overview

British Council and the CBSE (Central Board of Secondary Education) signed an MoU for collaboration on supporting enhancement of quality of teaching and assessment in schools. This joint conference will allow the two organisations to deliver on the MoU agenda of sharing knowledge and expertise between sector experts in both countries.

In India, at the policy level the recently announced National Education Policy 2020 (NEP 2020) and the recently published National Curriculum Framework (NCF 2023) encourages an integrated curricular approach in schools that will bring together essential subjects, skills and capacities within the curriculum and pedagogy - 'Concerted curricular and pedagogical initiatives, including the introduction of contemporary subjects, such as Artificial Intelligence, Design Thinking, Holistic Health, Organic Living, Environmental Education, Global Citizenship Education (GCED), etc. at relevant stages will be undertaken to develop these various important skills in students at all levels.' Interestingly the new National Curriculum Framework mentions climate change 54 times whereas the NCF 2005 did not mention it at all. This demonstrates the increased importance of climate education. And CBSE is leading some of the implementation of the strategy through its innovation and initiatives like project Shunya.

The recently launched 'State Education Report for India 2023 – Seeds of Change' from UNESCO states, that 'the education sector in India is at a crucial juncture, requiring focused attention and concerted efforts to address issues of climate change and seize emerging opportunities.' British Council in one of the partners in the development of this report.

The Department of Education, UK Government's 'Sustainability and Climate Change Strategy's' vision is for the United Kingdom to become the world-leading education sector in sustainability and climate change by 2030. The strategies to achieve this ambition has been outlined as below:

- increasing opportunities for climate education and access to nature.

- driving opportunities to increase biodiversity and climate resilience.
- co-ordinating and leading a whole-setting approach to climate change and sustainability.

British Council's Climate Connection initiative is another ambitious programme that has been bringing people around the world together to meet the challenges of climate change. Through arts and culture, education and the English language, it is about ideas, innovation and real change.

Towards these goals and initiatives, the British Council and CBSE have been working together to jointly create programmes and resources that support institutional and systemic development across schools in India – specifically CBSE and State Government schools. This collaboration has helped create and build a wide range of educational tools and resources, including those that drew on the expertise of UK and Indian professionals and agencies.

We are now hosting the Schools Education Conference

Furthering Innovation and Sustainable Education in Schools

in New Delhi from, 14 – 15 December 2023

This conference aims to highlight and showcase a selection of these initiatives through a variety of educational and capacity-building activities, such as masterclasses, workshops, competitions, and plenaries. The aim of this conference is to encourage positive conversations, learn from each other, share knowledge, expertise, and skills with educators, school administrators, policy and decision makers from governments in India and other South Asian nations.

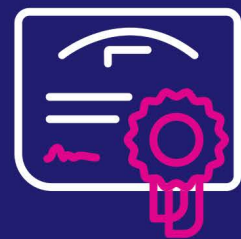

Objectives

- Increase awareness and use of professional development tools and resources already accessible to educators, school administrators, and instructors.
- Share knowledge and information about the UK's and the British Council's education research initiatives, capacity building programmes and projects.
- Recognise and celebrate inspiring and successful initiatives by teachers and schools from across the country through competitions and workshops.

Focus strands

- **Strand 1:** Understanding and putting policies into practise using contextually appropriate methods for teaching, learning and assessment.
- **Strand 2:** Curriculum, pedagogy, and assessment priorities for 21st Century schools and school boards.
- **Strand 3:** Enhancing computational thinking and digital technology in the classroom.
- **Strand 4:** Integrating environment education, sustainability and mindfulness across subject areas.

Participants

- India: State government, central government apex body leaders and leaders of school systems including policy makers.
- UK: Education experts, agencies, organisations and consultants
- Other countries: Live streaming
